

Hybrid Solutions

Hybrid energy systems are designed to provide reliable on-grid systems capable of net metering or off-grid power for homes, farms, and small businesses that want to conserve energy and reduce their utility cost. A hybrid system that combines wind and solar technologies offers several advantages over just a stand alone wind system or a stand alone solar system, since the hybrid system is capable of producing a consistent stable power supply in all types of weather. Because the peak operating times for wind and solar occur at different times of the day and year, hybrid systems are more likely to produce power when you need it. For the times when neither the wind turbine nor the solar modules are producing, TX Wind and Solar, LLC's hybrid systems provide power through long lasting DC batteries.

Dyocore

We at TX Wind and Solar are committed in researching, testing and bringing new technologies to the marketplace. Our Dyocore wind and solar hybrid generator is just one of those items. Ask an associate for additional details about this unique product.

DyoCore has exciting breakthroughs in the development of new ultra efficient residential wind/ solar hybrid designs.

Solar Solutions

Solar Energy is the ultimate renewable energy source. In our new era of environmental concerns regarding global warming and CO2 emissions, solar energy can be one of our planet's best solutions. Because of recent technology changes, solar panels are now more efficient and less expensive than just a few years ago.

Additional benefits of PV systems are their life spans. Most panels are warranted for 25 years and have been tested for 40 years. Due to recent changes in tax credits, energy rebates and solar incentives, now is the BEST TIME EVER TO GO GREEN with TX Wind and Solar, LLC.

Call us and let us design and install a system for you. We are your one stop shop for Solar Energy Solutions!!

Wind Solutions

At TX Wind and Solar, LLC we conduct a free site evaluation to determine the feasibility of a Wind Turbine. Being in a good wind area is very important. The average wind speeds in our area are 10.6 mph, but every area is unique and needs to be reviewed individually. Depending on your topography, the space that you have available for the turbine, access in installing the turbine, HOA restrictions and height perimeters; a Wind Turbine could be the right solution for you

Solar/Thermal Solutions

- Solar hot water is the most effective solar solution available, 80% of the energy is captured.
- A solar hot water system can save you 30% on your electric bill.
- High efficiency cathode ray collection tubes with air flow design and high strength aluminum alloy molding is standard on our system.
- Each System comes with dual tanks, complete with heat collector, storage tank, computer controller, and digital displays
- Adds value to your home and reduces your carbon footprint.
- Federal Tax Credit of \$1500 saves you big money.
